

## BODY

### EXTERIOR DESIGN AND EXTERIOR EQUIPMENT

- A stylish front air scoop, which also serves as the air intake for cooling the traction motor, is provided below the front bumper.
- A rocker panel moulding made of The Super Olefin Polymer has been provided. Together with the front air scoop, this moulding help realize an exterior design with the sense of stability. Furthermore, the rocker panel moulding also provides a function to protect the traction batteries.
- The spare tire is located under the floor to realize a clean rear design.
- A large air intake for the battery cooling system, which perfectly fits the body style, is provided in the quarter panel.
