

COMBINATION METER

DESCRIPTION

A triple-lens type analog meter that provides excellent visibility has been adopted for the combination meter of the RAV4 EV. This combination meter features the following characteristics:

- Even while the traction batteries are being charged, the battery residual capacity can be checked on the SOC (State Of Charge) meter.
- A malfunction indicator light is provided to inform the driver of any malfunction in the drive system and in the battery control system.
- A motor system caution warning light is provided to inform the driver that the motor’s output is limited.
